

This set of fittings will allow you to convert your own watering equipment over to Hoselink!

## What's Included:

### Universal Tap Connector

Screws onto any size Australian tap for a watertight seal between your tap and hose. Can be used with accessories that have a male thread (e.g. pressure washers, caravans, boats).

### Spare O-Rings 12mm

Black rubber O-rings securely fit into the groove in the face of each 12mm Hoselink fitting to ensure a watertight seal.

### Accessory Connector

Securely connects your hose to your watering accessory (e.g. spray gun, nozzle or sprinkler) in a watertight seal that won't leak or burst off. Screws directly into the thread of your watering accessory or any outlet with a female (inner) thread.

### Click-On Adapter Set

Connect your Hoselink fitted hose to your 'click-on' watering accessories. Simply screw the Accessory Connector into the Click-On Adapter to connect your hose and watering accessory. Not covered by the Hoselink no-burst guarantee.

For more information on how to adapt to Hoselink, please view this link:
